AJIT SHAMSUNDAR PARASKAR

B.E. - Computer Engineering

Ph: +91-9673706382

Email: ajitparaskar87@gmail.com

Pune City, Maharashtra, India - 411018

LinkedIn: https://www.linkedin.com/in/ajit-paraskar-21b923287/

BRIEF SUMMARY

Motivated Computer Engineering student with a strong foundation in software development, data structures, and full-stack web technologies. Experienced in building scalable applications using the MERN stack, Flask, and modern APIs. Developed real-world projects including an AI-based Music Recommendation System and a Smart Knowledge Explorer using React and Flask. Passionate about problem solving, system design, and building impactful software solutions.

KEY EXPERTISE

MERN Stack | React.js | Node.js | Express.js | Flask | MongoDB | PostgreSQL | REST APIs | JavaScript | HTML | CSS | Git | Data Structures & Algorithms | API Integration | Machine Learning Basics | Problem Solving

EDUCATION

Dr. D. Y. Patil Institute of Technology — 2023 - 2027

B.E. - Computer Engineering | CGPA: **8.46** / **10**

sambhaji raje junior college, Ahmednagar — 2022

12th | MSBSHSE | Percentage: **88** / **100**

Model english high scool, beed — 2020

10th | MSBSHSE | Percentage: **89.40** / **100**

INTERNSHIPS

CodeAlfa | IT / Computers - Software — 20 Dec, 2025 - 20 Jan, 2026

Frontend Web Developer

Key Skills: ReactJS | HTML | CSS | Javascript

Organization: CodeAlpha
Role: Intern (Technology-based Internship)
Mode: Remote
Duration: 1 Month (typical)
Description:
Worked on practical projects and tasks related to programming and development, focusing on improving problem-solving skills, hands-on coding experience, and real-world application of concepts.

PROJECTS

Smart Knowledge Explorer — 27 Feb, 2026 - 02 Mar, 2026

Mentor: Personal Project | **Team Size:** 1

Key Skills:

Flask | React.js | MongoDB Atlas | JWT Authentication | REST API | Wikipedia API | Axios | Full Stack Development

Project Link: https://github.com/ajitparaskar/Smart_knowledge_explorer

Developed a full-stack knowledge exploration platform that allows users to search and explore information using the Wikipedia API. The system provides summarized search results and detailed article views with a clean and responsive user interface.

The backend was built using Flask and integrated with MongoDB Atlas for storing user accounts and search history. JWT authentication was implemented to provide secure user login and protected API routes.

The frontend was developed using React.js with Vite for fast development and Axios for API communication. The application includes features such as user authentication, real-time search results, history tracking, and a scalable REST API architecture.

This project demonstrates practical implementation of full-stack development, secure authentication, API integration, and database-driven application design.

AI Music Recommendation System — 01 Feb, 2026 - 15 Feb, 2026

Mentor: Personal Project | **Team Size:** 1

Key Skills:

Python | Flask | React.js | Machine Learning | TF-IDF | Cosine Similarity | REST API | YouTube API | Data Processing

Project Link: https://music-recomendation-system-1n6o.vercel.app/

Developed an AI-powered music recommendation system that suggests songs based on user input using machine learning techniques. The system uses TF-IDF vectorization and cosine similarity to analyze song metadata and recommend similar tracks from a dataset of over 113,000 songs.

The backend was developed using Flask to build RESTful APIs for recommendation generation, while the frontend was built using React.js to provide an interactive user interface. The system integrates external APIs such as the YouTube API to enable real-time music playback within the application.

Key features include intelligent song recommendations, dynamic search functionality, an interactive floating music player, and real-time audio playback. The project demonstrates full-stack development, machine learning integration, and API-based system architecture.

ACHIEVEMENTS

- Published a Patent for Child Learning Disability Device

ASSESSMENTS / CERTIFICATIONS

Postman API Fundamentals Student Expert

Key Skills: API Testing | REST APIs | HTTP Methods | Postman | API Requests & Responses | JSON

Completed the Postman API Fundamentals Student Expert certification program, which focuses on understanding and working with APIs using Postman. Learned how to create and send API requests, test REST APIs, manage collections, and analyze API responses.

The certification covers important concepts such as HTTP methods, request parameters, authentication, JSON responses, and API documentation. It also includes practical experience in debugging APIs and organizing API workflows using Postman.

This certification demonstrates practical knowledge of API development, API testing, and modern API tools used in software development.

The Complete Python Bootcamp From Zero to Hero in Python

Key Skills:

Python Programming | bject Oriented Programming | Functions | File Handling | Error Handling | Python Libraries | Problem Solving

Completed “The Complete Python Bootcamp: From Zero to Hero in Python” on Udemy instructed by Jose Portilla (Pierian Training). The course covered core Python programming concepts including variables, data types, control flow, functions, object-oriented programming, modules, file handling, and error handling.

Gained practical experience in writing Python programs, working with data structures, and building small applications using Python. The course also focused on problem-solving techniques and real-world programming practices used in software development.

PERSONAL INTERESTS / HOBBIES

- Exploring new technologies and building real-world software projects
- Practicing Data Structures & Algorithms to enhance problem-solving skills
